

FIG. 1 is a perspective view of a device 10, which is a flexible, elongated, tubular member, having a proximal end 22 and a distal end 24. The device 10 is shown in a bent configuration, with a bend 20. The device 10 is formed of a material which is flexible and resilient, and is capable of being bent into a desired shape. The device 10 is shown in a perspective view, and is labeled with the numeral 10. The proximal end 22 is shown at the top of the device, and the distal end 24 is shown at the bottom. The bend 20 is shown in the middle of the device. The device 10 is shown in a perspective view, and is labeled with the numeral 10. The proximal end 22 is shown at the top of the device, and the distal end 24 is shown at the bottom. The bend 20 is shown in the middle of the device.
